

# Math exam

<b>Difficulty:</b>	Hard
<b>Requirements:</b>	Standard library
<b>Aims:</b>	Learn to work with the standard library

- Write a program that asks the user to solve some simple mathematic tasks.
- If the user answers wrong, the program should abort with an error.
- **Experts:** At the end, print the time it took the user to answer all the questions.

## Hints

- Remember the `assert()` macro?
